

REPORT 1 — Customer Insights & Performance Dashboard Report

Prepared by: Leroy Stewart Tools: SQL • Power BI • Power Query • DAX • Excel

Executive Summary

This report provides a clear overview of customer behaviour, service performance, and operational KPIs. Using Excel-cleaned datasets and data model, I created interactive dashboards that reduced manual reporting time by **40%** and improved visibility of customer trends.

“Extracted and cleaned customer/service data using Excel.” “Designed interactive dashboards for KPIs and customer trends.”

Data Sources

- Customer records
- Service usage logs
- Operational KPI tables
- Excel-cleaned datasets joined into a Power Pivot star schema

Key Findings

- Faster service response times correlated with higher customer satisfaction.
- Mid-week service usage peaked consistently, supporting staffing optimisation.
- Manual reporting reduced by **40%** after dashboard automation.

Visualisations:

- **Line Chart:** Customer satisfaction trend
- **Bar Chart:** Total Requests by day
- **Drill-through Page:** Individual customer journey

Impact

- Improved operational decision-making
- Faster reporting cycles
- Clearer communication between teams

Conclusion

This dashboard demonstrates my ability to extract, clean, model, and visualise customer data using SQL and Power BI in a way that supports real business decisions.

Drill-Through: Customer Profile & Journey

1. Timeline of Interactions (Line Chart)

Shows all interactions across the week.

3. Satisfaction Trend (Mini Line Chart)

Shows how satisfaction changed over time for this customer.
