

REPORT 6 — Operational Efficiency & SLA Risk Review (Updated with Visual Hypotheses)

Company: *HelpWave Support Services*

Period: *Sept 2025 – Aug 2026*

Analyst: *Leroy Stewart*

Executive Summary

HelpWave’s support operations show rising SLA breach risk due to staffing gaps, ticket spikes, and workflow inefficiencies.

SLA Performance Overview

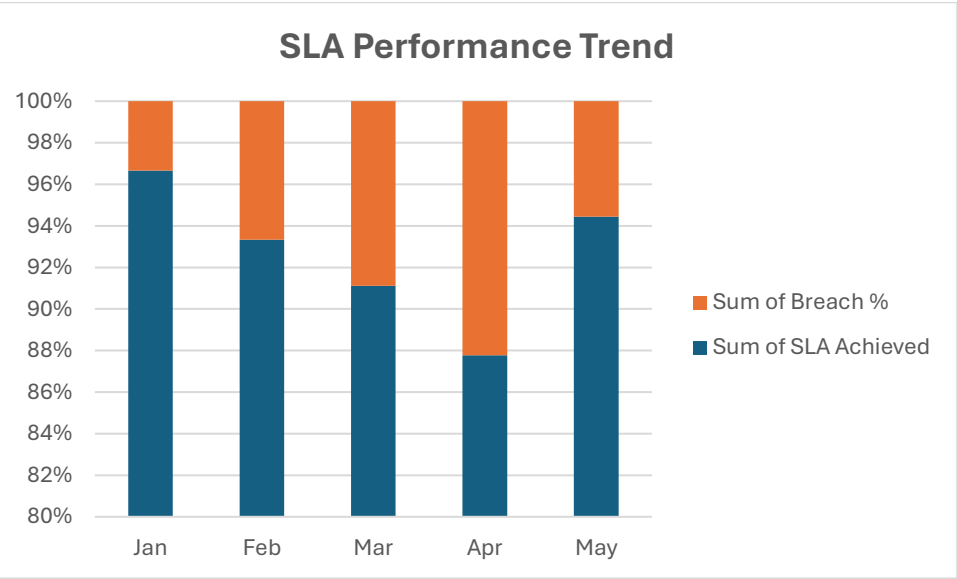

Visual Hypothesis

We expect SLA performance to decline between February and April due to increased ticket volume and staffing shortages.

SLA Performance Trend Summary

Month	SLA Target	SLA Achieved	Breach %
Jan	90%	87%	3%
Feb	90%	84%	6%
Mar	90%	82%	8%
Apr	90%	79%	11%
May	90%	85%	5%

SLA Performance Trend Bar Chart

Ticket Volume & Staffing

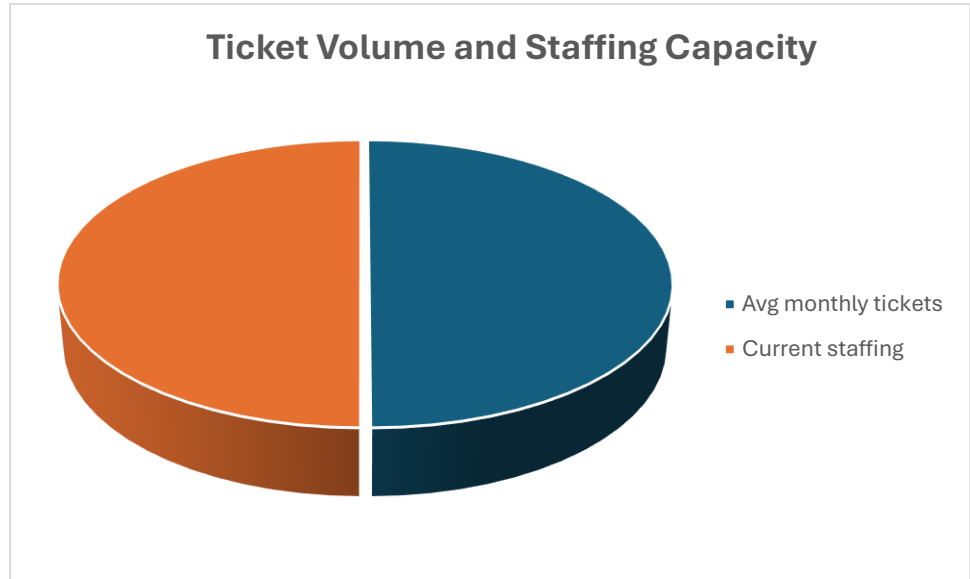

Visual Hypothesis

We expect to see a mismatch between ticket spikes and available staffing, confirming operational strain.

Ticket Volume and Staffing Capacity Table

Metric	Value
Avg monthly tickets	18,400
Peak month	22,900 (March)
Current staffing	32 agents
Re-quired staffing	38 agents

Ticket Volume and Staffing Capacity Pie Chart

Root-Cause Breakdown

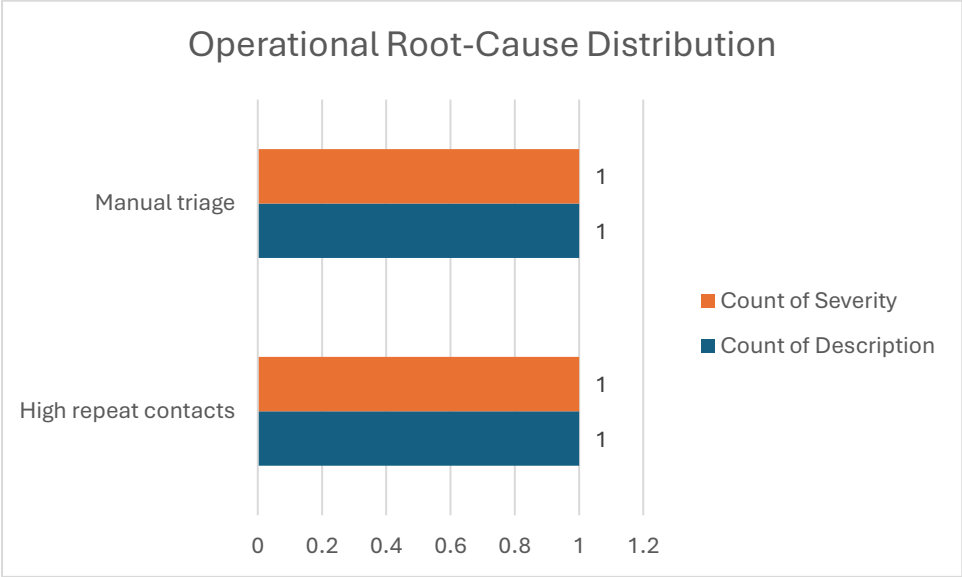

Visual Hypothesis

We expect manual triage and repeat contacts to be the highest contributors to SLA breaches.

Operational Root-Cause Breakdown Summary

Issue	Description	Severity
Understaffing	6-agent deficit	High
Manual triage	Slow ticket routing	Medium
High repeat contacts	Poor resolution quality	High
No proactive support	Reactive only	Medium
